

M-TYPE by Dürkopp Adler (ENGLISH)

M-TYPE - the vision

In view of its long-standing reputation as the technology leader in the field of industrial sewing machines for medium-heavy duty applications, Dürkopp Adler has a commitment to continue developing pioneering technology. With the M-TYPE Dürkopp Adler has set a new productivity standard which changes the world of medium-heavy duty sewing. Be part of it!

Defined functionality levels

The machines of the M-TYPE series are available in three versions: ECO, CLASSIC and PREMIUM. Each version provides a clearly defined level of functionality and upgradability and is precisely adapted to the specific requirements of the user. You only pay for what you really need.

Customer orientation

The multitude of possibilities offered by the M-TYPE allows an optimum adaptation to your demands. Whether you are a specialist for the production of car seats, trendy upholstered furniture or safety-sensitive products made of technical textiles – you will find exactly the right model for your requirements in the M-TYPE modular system.

Future prospects

With the „First of M-TYPE " Dürkopp Adler has presented the new platform for the first time. Of course, this concept will be constantly further developed in future - from the heavy-duty post bed and free arm sewing machines up to customised solutions for the future of shoe machines.

All products are developed on the basis of the same platform and have similar modules. A low-cost stock of spare parts and easy maintenance are your advantages now and in future.

Benefits of the M-Type series for maintenance and repairs

The M-Type, the best selling triple feed machine for medium heavy duty sewing ever, offers not only unbeatable sewing performance but also a lot of benefits with regard to service and maintenance.

The biggest advantages are:

- **Low service and repair cost** due to 30% less mechanical parts than in the former 767 series. Less parts reduce the probability of defects and save cost for stocking spare parts.
- **Only 5 tools for the adjustment of the complete machine.** Who is using different machine types like flatbed, postbed, long-arm, etc., will appreciate that the same tools can be used for all types. It will also save time for technician training.
- **Quick machine cover disassembly.** Only 10 screws must be unfastened to disassemble all covers before you can already start servicing the machine. This will save valuable working time.
- **Many sewing gauges of class 767 and other Dürkopp Adler machines can be used.** Who has some gauge parts of those machines on stock can use them on the M-Type, too. See an [overview of the usable parts](#). Also a couple of [piping and zipper feet](#) of other machines are used on the M-Type.
- An **oil control glass with warning light** will avoid late oil recharge and will increase the machine lifetime.

Servicing the machine can be supported by a [preventive maintenance plan](#). With this plan, all maintenance work and spare part consumption can easily be documented

M-TYPE

A concept as it could only be developed by Dürkopp Adler because it is backed by the Dürkopp Adler people with all their competence.
