Union Special Wants to Help You Cut Sewing Machine Maintenance Costs

Union Special is offering two practical systems to help pinpoint and reduce your sewing machine maintenance costs: a record keeping system to help spot machines requiring abnormally high maintenance, and a parts inventory system to speed routine repairs.

Machine Maintenance Records

Repair-prone machines or inexperienced competent operators can eat up your maintenance dollars in short order. To help spot these problems, Union Special suggests two variations of a simple maintenance record keeping system using cards provided by Union Special.

The first system utilizes a "Machine Maintenance Record" card (Form 237) for each sewing machine in a plant. When a repair is required, the card is pulled from the file and the repair date, parts used, and their cost are entered in the spaces provided and the card is refiled.

		MACHINE	MAIN	TENANCE	RECORD		
MA	KER'S NAME	STYLE	7	YPE NEEDLE	SERIAL NO.	DATE PURC	ж.
DATE				1 1			
DATE	SYMBOL PART U	SED	COST	DATE	SYMBOL PART U	IED CC	787

		- 40	ine M	ainterio			1
	~	Mach Reco	nd ca	ra			†
			-				‡
				1			1
							+
		- 1		1			Т

The second system is normally used when more detailed information on repair costs is desired. Two record cards are used: a "Repair Request Card" (Form 234), and a "Machine Repair Record" (Form 233). When a machine requires service, the forelady or foreman fills out the top of a "Repair Request Card" and gives it to a mechanic. He fills in the time the repair work is started, the parts used and their cost,

and the completion time. This data is then transferred to the permanent "Machine Repair Record" kept in the office.

Whichever system is used, management now has an invaluable tool to reduce needless maintenance costs.

Repair Part Inventories

While record keeping tells management which machines require abnormally high maintenance, it does little to help reduce the downtime caused by routine repairs. To alleviate this situation, Union Special recommends that manufacturers establish a formal parts inventory system for each type of sewing machine they operate.

Excessive machine downtime and wasted hours by mechanics can be eliminated with an orderly in-plant inventory of the most commonly needed parts. There is no longer a need to cannibalize other machines for spare parts. Long waits for deliveries are avoided and machine downtime is kept to a minimum. The cost of a parts inventory is small when the overall savings are considered.

INDUSTRIAL SEWING MACHINES CHICAGO

Printed in U.S.A.

IDENTIFICATION OF MACHINES

Each UNION SPECIAL machine is identified by a Style number which is stamped into the name plate on the machine. Style numbers are classified as standard and special. Standard Style numbers have one or more letters suffixed, but never contain the letter "Z". Example: "Style 51000 B". Special Style numbers contain the letter "Z". When only minor changes are made in a standard machine, a "Z" is suffixed to the standard Style number. Example: "Style 51000 BZ".

Styles of machines similar in construction are grouped under a class number, which differs from the style number in that it contains no letters. Example: "51000".

APPLICATION OF CATALOG

This catalog applies specifically to the Standard Styles of machines as listed herein. It can also be applied with discretion to some Special Styles of machines in Classes 51000 and 51100. Reference to direction, such as right, left, front, back, etc., are given from the operator's position while seated at the machine. Operating direction of the handwheel is toward the operator.

STYLE OF MACHINE IN CLASS 51000

Left Hand Flat Bed High Throw Machine, Single Needle, 1 1/2 Inch Needle Bar Travel, 1 1/4 Inch Looper Travel, Needle Bearings for Feed Crank, Feed Lift and Looper Avoid Eccentric, Single Reservoir Enclosed Automatic Lubricating System, Filter Type Oil Return Pump, Lateral Looper Travel, Maximum Work Space to Left of Needle Bar 8 1/2 Inches.

51000 B Upper and under feed machine for seaming valve type multi-wall paper bags. Stitch range 3 1/2 to 7, set at 3 1/2 S.P.I. Seam specification with valve type attachment, 401-BSa-1.

STYLES OF MACHINES IN CLASS 51100

Right Hand Flat Bed High Throw Machine, Single Needle, 1 1/2 Inch Needle Bar Travel, 1 1/4 Inch Looper Travel, Needle Bearings for Feed Crank, Feed Lift and Looper Avoid Eccentric, Single Reservoir Enclosed Automatic Lubricating System, Filter Type Oil Return Pump, Lateral Looper Travel, Maximum Work Space to Right of Needle Bar 8 1/2 Inches.

- 51100 R Upper and under feed machine for seaming valve type multi-wall paper bags. Stitch range 3 1/2 to 7, set at 3 1/2 S.P.I. Seam specification with valve type attachment, 401-BSa-1.
- 51100 S Same as 51100 R, except fitted with round belt pulley.

NEEDLES

Each UNION SPECIAL needle has both a type number and size number. The type number denotes the kind of shank, point, length, groove, finish and other details. The size number, stamped on the needle shank, denotes the largest diameter of blade measured in thousandths of an inch, midway between the shank and the eye. Collectively, the type number and the size number is the complete symbol.

Standard needle for Styles 51000 B, 51100 R and 51100 S is Type 947 G. It has a round shank, spear point, long length, double groove, ball eye, spotted, chromium plated - available in sizes 185/073, 200/080, 230/090.

NEEDLES (continued)

To have needle orders promptly and accurately filled, an empty package, a sample needle, or the type and size number should be forwarded. Use description on label. A complete order would read: "1000 Needles, Type 947 G, 185/073".

Selection of the proper needle size should be determined by size of thread used. Thread should pass freely through needle eye in order to produce a good stitch formation.

USE GENUINE NEEDLES AND REPAIR PARTS

Success in the operation of these machines can be secured only with genuine UNION SPECIAL Needles and Repair Parts as furnished by the Union Special Corporation, its subsidiaries and authorized distributors. They are designed according to the most approved scientific principles, and are made with utmost precision. Maximum efficiency and durability are assured.

Genuine needles are packaged with labels marked *Union Special*. Genuine repair parts are stamped with the Union Special trademark, US Emblem. Each trademark is your guarantee of the highest quality in materials and workmanship.

IDENTIFYING PARTS

Where construction permits, each part is stamped with its part number. On some of the smaller parts, and on those where construction does not permit, an identification letter is stamped in to distinguish the part from similar ones.

Part numbers represent the same part, regardless of catalog in which they appear.

IMPORTANT! ON ALL ORDERS, PLEASE INCLUDE PART NAME AND STYLE OF MACHINE FOR WHICH PART IS ORDERED.

TERMS

Prices are strictly net cash and are subject to change without notice. All ship-ments are forwarded f. o. b. shipping point. Parcel Post shipments are insured unless otherwise directed. A charge is made to cover postage and insurance.

OILING

The oil has been drained from the machine before shipping, and the reservoir must be filled before beginning to operate. Use a straight mineral oil with a Saybolt viscosity of 90 to 125 seconds at 100° Fahrenheit.

Oil is filled at the oil cup in the top cover and the level is checked at the sight gauge on the front of the machine. The oil level should be maintained between the red lines on the gauge. The capacity of the oil reservoir is 12 ounces.

The machine is automatically lubricated, and no oiling, other than keeping the main reservoir filled, is necessary.

A daily check before the morning start should be made and oil added if required. Oil which has gone through the machine is filtered and pumped back into the main reservoir, making too frequent oilings unnecessary. Excessive oil in the main reservoir may be drained at the plug screw in the main frame directly under the handwheel.

The following is a numerical list of the parts used in this machine. Quantities, part numbers, and descriptions are given. Following the parts lists are photographs of some of the major parts.
